Huayu **Zhang**

608-770-1803 | zhuayu@wisc.edu | http://gug11.github.io | https://github.com/GUG11

Education

University of Wisconsin-Madison — *Madison, WI, USA*

M.S./Ph.D. in Electrical Engineering — *Sep. 2015 - Present*

Tsinghua University — *Beijing, China*

B.E. in Engineering Physics — *Jul. 2015*

- GPA: 92/100, rank: 2/149
- Minor in computer technology. GPA: 92.4/100

Publications/Presentations

[1] **Huayu Zhang**, and Yuxiang Xing. Limited-angle Multi-energy CT using Joint Clustering Prior and Sparsity Regularization. SPIE Medical Imaging, , San Diego, USA, 2016.

Experience

Key Laboratory of Particle & Radiation Imaging, Tsinghua University — *Beijing, China*

Undergraduate research assistant for *Limited Angle Spectra CT Reconstruction* — *Nov. 2015 - Jul. 2015*

- Designed an easy and economic Multi-energy CT scan strategy.
- Proposed a mutual learning and cross-estimation (MLCE) method for DECT limited-angle problems, which incoporates machine learning approaches (neural networks) to study the relationship of inter-energy data and reduces the sampling data required by nearly 50%.
- Proposed a clustering-based method for Multi-energy CT limited-angle reconstruction, which mitigates the limited-angle artifacts by exerting a strong prior structural information constraints and reduces the sampling data required by nearly 66% for Tri-energy CT.
- Developed a CT reconstruction toolbox (https://github.com/GUG11/CT-Reconstruction)

Undergraduate research assistant for *Partial Volume Correction in Position Emission Tomography(PET)* — *Sep. 2014 - Nov. 2014*

- Proposed a method to calculate Point Spread Function (PSF) of PET systems reaching an accuracy of 0.1mm through simulation.
- Proposed a feedback network method, which improved the RBV correction result and facilitated 5mm lesion detection.

NucMed technology Ltd — *Beijing, China*

Internship — *Jul. 2014 - Aug. 2014*

- Developed a nuclear signal processing software with Butterworth filter and non-local mean filter.

Academic Design Projects

Pipelined microprocessor

University of Wisconsin-Madison — *Oct.2015 - Nov. 2015*

- Implemented a microprocessor model with 16 instructions and five stages pipelined registers using verilog.
- Accelerated the processor with data forwarding and register bypassing technology.
- Implemented a cache controller improving the efficient of the memory management.

Ad-hoc imaging systems on Android phones

University of Wisconsin-Madison — *Sep. 2015 - Dec. 2015*

- Designed a camera motion tracking system with 10cm accuracy
- Designed a handheld near-field imaging systems which could imaging non-line-of-sight objects.

Fast MRI reconstruction

Tsinghua University — *Oct. 2013 - Dec. 2013*

- Accelerated parallel sampling using GRAPPA(Generalized Auto-calibrating Partially Parallel Acquisition).
- Enabled 4-fold under-sampling without obviously degrading image quality by combining interpolated compressed sensing with GRAPPA

Honors & Awards

2012-2014 **Scholarship,** Tsinghua University Outstanding Study Awards — *Beijing, China*

2014 **Scholarship,** Tsinghua University Evergrande Scholarship — *Beijing, China*

2014 **3rd Prize,** Tsinghua University “Challenge Cup” competition of science and technology — *Beijing, China*

Skills

Programming	Python (Fluent), C/C++ (Fluent), Matlab (Professional), Java (Familiar), MySQL (Basic)
Computer skills	Linux, Git, Latex, Markdown, Poster
Languages	English, Chinese (Native)
